1. Pick any dataset you want

2. Apply all the steps we learned before, from start to finish

3. Tune the hyperparameters of both **Decision Tree** and **Random Forest** models.

4. Build different pipelines with different preprocessing techniques and try them with different models.

5. Upload your notebook on **Kaggle**

6. Share your work as a post on **LinkedIn** and mention **Eng. Haneen** in your post
